PROFESSIONAL SUMMARY

Computer Science graduate (B.E., CGPA 8.35) applying for the Software Engineer role at IBM India Systems Development Lab. I write Python and Java, and I have applied object-oriented design, data structures and algorithms, and Git-based workflows in an internship and two machine learning projects. Interested in the AI Software Engineer track, where machine learning, NLP and software development come together on enterprise systems.

EDUCATION

B.E. in Computer Science & Engineering, Alva's Institute of Engineering and Technology, Mangalore 2022 - 2026
CGPA: 8.35

Karnataka Board PUE (Science), Sri Adichunchanagiri Independent PU College, Shivamogga 2020 - 2022
81.33%

Secondary School Leaving Certificate, Stella Maris High School, Honnali 2018 - 2020
85.44%

TECHNICAL SKILLS

Languages: Python, Java (data structures and algorithms), SQL (MySQL), HTML, CSS
Core Engineering: Data Structures and Algorithms, Object-Oriented Programming, Software Design Principles, Debugging and Troubleshooting, Clean and Maintainable Code, Agile Development, Code Reviews, REST API Integration
AI / ML: Machine Learning, Deep Learning (CNN), Natural Language Processing, Explainable AI, Data Preprocessing, Model Evaluation, Data Labeling and QA
Libraries / Frameworks: Scikit-learn, TensorFlow, Pandas, NumPy
Databases: MySQL, MongoDB
Tools: Git, GitHub, VS Code, Google Colab (Jupyter Notebooks)

INTERNSHIP

Data Science Intern, Prinston Smart Engineers

- Cleaned and preprocessed real-world datasets in Python, handling missing values, encoding and feature scaling before model building.
- Built and tested Logistic Regression, Decision Tree and Random Forest models for prediction tasks, and debugged cases where outputs did not match expectations.
- Found inefficiencies in the existing data pipeline, suggested code-level fixes and documented the changes for the team.

PROJECTS

Loan Approval Prediction using Machine Learning and LLM | *Python, Scikit-learn, Groq LLM API, Git*

- Wrote an object-oriented Python pipeline that reached 90-96% accuracy across three algorithms, and debugged ambiguous prediction cases step by step.
- Integrated the Groq LLM API so the model explains approval and rejection decisions in plain English, which made results easier to trust.
- Organized the code into reusable modules so applicant details return a prediction with reasoning instantly.
- Evaluated model quality using confusion matrix, precision, recall and F1-score, and tracked every change with Git.

AI Model for Automated Content Moderation | *NLP, CNN, MongoDB, Python*

- Built a system combining NLP and image processing to flag offensive content in text and images, with the two pipelines kept as separate, testable modules.
- Applied NLP techniques to detect toxic, abusive and hate speech in user-generated text.
- Trained CNN models to detect explicit imagery, violence and hate symbols, and debugged misclassifications over several rounds of testing.
- Reviewed mislabeled examples to find failure patterns and rewrote annotation guidelines to reduce labeling errors.

ACHIEVEMENTS AND CERTIFICATIONS

- Recognised for developing 'Smart Tour Guide Expense Splitter' at SAP Hack Feast, MITTE Engineering College, Mangalore.
- Certified in Data Structures and Algorithms using Java, Infosys Springboard.
- Represented Honnali Division in Badminton at the 2018 District-Level Meet, Davanagere; volunteered at the International Cultural Jamboree, a global Scouting event.
