EXPERIENCE

Oracle - Project Intern

(Jan 2026 – Present)

- Contributed to migrating Oracle Aconex Mobile API from **Spring Boot to Micronaut**, restructuring the backend into a modular Java architecture based on **Clean Architecture principles**.
- Refactored REST controllers, services, DTOs, request filters, and downstream client integrations while preserving existing API behavior.
- Used **Codex-assisted workflows** to analyze migration patterns, speed up refactoring, and validate test coverage under code review.
- Added and updated tests to verify migrated endpoints, serialization behavior, and framework compatibility.

Infosys Springboard - Artificial Intelligence Intern

(Nov 2024 – Jan 2025)

- Developed a **Fraud Detection System** using Python and Scikit-learn, contributing to data preprocessing, model tuning, and transaction risk analysis.
- Preprocessed datasets with 10,000+ records, fine-tuned models, and implemented test cases to enhance accuracy and reduce false positives.

NFThing - Backend Developer Intern

(Apr 2024 – Apr 2025)

- Contributed to the backend development of **Deflix**, a scalable movie rating platform, using Node.js and MongoDB.
- Delivered 5+ RESTful APIs with unit tests and integrated logging to optimize scalability and monitor performance.

EDUCATION

Ramaiah Institute of Technology, Bengaluru

(Dec 2022 – present)

Bachelor of Engineering, Information Science; CGPA: **9.00**; Expected Graduation: 2026

Sri Adi Chunchanagiri Independent PU College, Shimoga

(Nov 2020 - April 2022)

PCMB, Percentage: **95.6%**

PROJECTS

GrooveGrid - Music Production Project Manager | React/Next.js, Tauri, Rust, SQLite, MongoDB

- Developed a Windows desktop application for music producers to manage projects, track production progress, and streamline workflows, supported by a web portal for account management and software distribution.
- Implemented a **drag-and-drop Kanban workflow** with **7 production stages**, project notes, task management, idea capture, session timers, analytics, and instant DAW project launching backed by SQLite.
- Built a secure full-stack architecture integrating React.js, Express, and MongoDB with **email/Google auth**, device-login handoff, **Razorpay subscription billing and webhook handling**, and offline-first persistence.

PickMyCollege - Data-Driven College Selection Assistant | Python, MongoDB, ReactJS, NodeJS

- Engineered intelligent **college recommendation** system for KCET students using weighted average algorithms and reached **3000+ users** in 2 weeks.
- Optimized system performance through **pre-computation**, **tiered caching**, and **parallel processing**, reducing response times by 90% (100 seconds to 10 seconds).
- Built an automated pipeline to extract, validate, and standardize historical cutoff data from Excel to database.

HACKATHON ACHIEVEMENTS

- Winner – Enigma 2k24** – Developed a stock market analysis tool with ML and sentiment analysis.
- 1st Runner-Up – Hackwell 5.0** – Designed a metadata extraction pipeline from PDFs using Regex and LLM APIs for document parsing.

SKILLS

- Coursework:** Operating Systems, Computer Networks, Database Management Systems
- Backend Development:** Spring Boot, Micronaut
- Programming Languages:** Java, Python
- Data Structures & Algorithms**
- Operating Systems:** Linux, Windows
- Version Control & CI/CD:** Git, Docker, Jenkins
- Databases:** SQL, MongoDB
- Deep Learning**
- Web Development:** HTML, CSS, JavaScript
