Dear Hiring Manager,

I am writing to express my interest in Software Engineer / Software Development opportunities at your organization. I am a final-year Computer Science & Engineering student (CGPA 8.35) with a strong foundation in data structures and algorithms, object-oriented programming, and software design principles, and I am looking for a role where I can write clean, maintainable Python code while growing my debugging and agile development skills on production systems.

During my internship as a Data Science Intern at Princeton Smart Engineers, I cleaned and preprocessed real-world datasets, built and debugged Logistic Regression, Decision Tree, and Random Forest models, and identified inefficiencies in an existing data pipeline that I documented and helped fix. This experience sharpened my ability to work through ambiguous, real-world problems methodically and to communicate technical changes clearly to a team.

Outside of my internship, I have built end-to-end projects that reflect how I like to work. In my Loan Approval Prediction system, I designed an object-oriented Python pipeline reaching 90-96% accuracy across three algorithms, integrated an LLM API to explain predictions in plain English, and evaluated model quality using confusion matrices, precision, recall, and F1-score, all version-controlled with Git. In my AI-based Content Moderation project, I combined NLP and CNN pipelines to flag toxic text and explicit imagery as separate, testable modules, iterating through mislabeled examples to reduce annotation errors. Both projects reflect my comfort with the full lifecycle of a machine learning feature: data preparation, modeling, evaluation, and clear documentation.

I use Git on every project, enjoy working in team settings, and am comfortable with tools like VS Code, Google Colab, and libraries such as Scikit-learn, TensorFlow, Pandas, and NumPy. I would welcome the opportunity to bring this same care and curiosity to a Software Engineer role at your organization, and to keep learning from an experienced engineering team. I have attached my resume for your review and would be glad to discuss how my background fits your needs.

Thank you for considering my application. I look forward to the possibility of speaking with you further.

Sincerely,
Chethan D B
